Findings

Distraction Index (DI): Right DI = 0.51, Left DI = 0.72.
Osteoarthritis (OA): **No radiographic evidence of OA for either hip.**
Cavitation/Other Findings: No cavitation present.

Interpretation

Distraction Index (DI): The laxity ranking is based on the hip with the greater laxity (larger DI). In this case the DI used is 0.72.

OA Risk Category: The DI is greater than or equal to 0.70. This patient is at high risk for hip OA.

Distraction Index Chart:

BREED STATISTICS: This interpretation is based on a cross-section of 28824 canine patients of the GOLDEN RETRIEVER breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.32 - 0.78) for the breed. The breed average DI is 0.52 (solid square). The patient DI is the solid circle (0.72).

SUMMARY: The degree of laxity (DI = 0.72) falls within the central 90% range of DIs for the breed. This amount of hip laxity places the hip at a high risk to develop hip OA. **No radiographic evidence of OA for either hip.**
